Cover: Decimal values can be entered

Caves: For habitat types 8310 and 8330 (caves), the number of caves when the estimated surface is not available.

Data Quality: G = Good (e.g. based on surveys), M = Moderate (e.g. based on partial data with some extrapolation), P = Poor (e.g. rough estimation)

Representativity: A = excellent representativity, B = good representativity, C = significant representativity, D = non-significant presence

Relative Surface: A ≥ 15%, B = 2-15%, C ≤ 2%

Conservation: A = excellent conservation, B = good conservation, C = average or reduced conservation

Global: A = excellent value, B = good value, C = significant value

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Other Site Characteristics

Laderas cubiertas por matorrales basófilos y gipsófilos, en cuya base existen parcelas dedicadas a olivar y cultivos herbáceos de secano.

4.2 Quality and importance

Las laderas de Tendilla contienen una muestra de las comunidades gipsófilas existentes en numerosos barrancos de la Alcarria de Guadalajara, algo más empobrecidas en especies gipsófilas que los yesares del valle del Tajo o de la Alcarria Conquense, que manifiestan la mayor riqueza dentro de la subalianza *Lepidium subulati*. Junto a las estepas yesosas, donde a veces aparecen costras de yesos y líquenes, están presentes otros hábitats como los espartales ó pastizales salinos con juncuales en enclaves con rezumaderos de aguas duras, donde se desarrolla, entre otras especies, el junquillo negral o *Schoenus nigricans*. Asimismo, es de interés la presencia de *Thymus lacaitae*, *Ononis tridentata*, *Teucrium pumilum*, *Ephedra fragilis*, *Helianthemum squameatum*, *Lygeum spartium*, *Herniaria fruticosa* y *Gypsophila struthium*. Dentro de sus valores sobresalientes y especies más representativas cabe mencionar, además, las aves esteparias con predominio de aláudidos.
